

CONTENTS – Volume 49, Part 3, August 2016

Landslide Research in China

- A case study of pillar-shaped rock mass failure in the Three Gorges Reservoir Area, China**
B. Huang, Z. Zhang, Y. Yin & M. Fei **195**

- Landslide stability evaluation using high-resolution satellite SAR data in the Three Gorges area**
X. Shi, M. Liao, L. Zhang & T. Balz **203**

Research article

- Repurposing of disused shale gas wells for subsurface heat storage: preliminary analysis concerning UK issues**
R. Westaway **213**

Technical note

- Groundwater recharge modelling in semi-arid regions; a case study of El Khairat alluvial plain (Tunisia)**
N. Brini & M. Zammouri **229**

- A combined surface and groundwater storage project: the Elmadag dam (Turkey)**
A. Apaydin & E. Zengin **237**

- Standardized terminology and test methods for sulphur mineral phases for the assessment of construction materials and aggressive ground**
M. A. Czerewko, I. Longworth, J. M. Reid & J. C. Cripps **245**

Discussion

- Discussion on 'Landslide risk assessment: the challenge of communicating uncertainty to decision-makers' *Quarterly Journal of Engineering Geology and Hydrogeology*, Vol. 49, 2016, pp. 21–35**
G. J. Hearn, N. A. O'Donnell & A. B. Hart **267**

- Book reviews** **269**

Quarterly Journal of Engineering Geology and Hydrogeology (ISSN 1470-9236) is published in February, May, August and November by the Geological Society Publishing House for the Geological Society, London. The Geological Society, Burlington House, Piccadilly, London W1V 0JU.

Subscription rates 2016 (volume 49, 4 parts). More information about subscription options can be found at <http://www.geolsoc.org.uk/LyellCollection>. Journal Subscriptions Department, Geological Society Publishing House, Unit 7, Brassmill Enterprise Centre, Brassmill Lane, Bath, UK, BA1 3JN (tel 01225 445046; fax 01225 442836; e-mail: sales@geolsoc.org.uk). The subscription prices for 2016 to institutions and non-Fellows is: UK, £481 + VAT (online only), £574 + VAT (online + print); EU, £539 + VAT (online only), £650 + VAT (online + print); Rest of World, £539 (online only), £650 (online + print). More information about subscription prices can be found at <http://www.geolsoc.org.uk/lcaccess>.

Outside Europe, the Journal is dispatched by various forms of airspeeded delivery. Airfreight and mailing in the USA by agent named Air Business Ltd, c/o Worldnet Shipping Inc., 156–15, 146th Avenue, 2nd Floor, Jamaica, NY 11434, USA. Periodicals postage paid at Jamaica NY 11431. US Postmaster: send address corrections to the Quarterly Journal of Engineering Geology and Hydrogeology, Air Business Ltd, c/o Worldnet Shipping Inc., 156–15, 146th Avenue, 2nd Floor, Jamaica, NY 11434, USA. Back numbers are normally dispatched by surface mail.

Cover Photograph. The road through the Grotte de Mas d'Azil in France. Limestone karst is best known among engineering geologists for its distinctive range of geohazards, most frequent of which are new sinkholes developed within the soil cover, whereas collapses of rock into underlying caves are less common. Caves can rarely provide a benefit within karst, by providing ready-made tunnels. In the fold-range foothills along the northern side of the Pyrenees, in southern France, the Grotte de Mas d'Azil was cut by the River Arize through a ridge of Cretaceous limestone forming the core of a gentle syncline. The cave is 420 m long and up to 50 m wide, with a stable roof arched up to bedding planes in the strong limestone. Though known and occupied since Palaeolithic times, it now carries Route Nationale 119 along the bank of the underground river and safely above flood level. The Mas d'Azil is one of only a few cave tunnels around the world; these include the road through the Grotta di San Giovanni in Sardinia, Italy, the railway through Natural Tunnel in Virginia, USA, and a handful of roads through large caves in remote parts of China.
